

Zoletil™

for Injection
(tiletamine and zolazepam for injection)

 Canine		 Feline	
Diagnostics	3-4.5 mg/lb	Minor procedures/ short duration (castrations, dentistry, laceration repair)	4.8-5.7 mg/lb
Minor procedures/ short duration (castrations, wounds)	4.5-6 mg/lb	Major procedures (Ovariohysterectomy)	6.5-7.2 mg/lb
IV for anesthesia induction (inhalant anesthetic maintenance)	1-2 mg/lb	Supplemental doses	Less than initial dose, total not to exceed 32.7 mg/lb

For more information contact a Virbac sales representative or visit: vet-us.virbac.com

CONVENIENT

Ready-to-use combination containing two molecules in a fixed ratio formulation providing:

- Rapid onset
- Flexible dosage
- IM or IV injection for dogs
- IM injection for cats
- Tiletamine HCL - a dissociative agent that produces profound analgesia plus deep surgical anesthesia in combination with zolazepam.
- Zolazepam - a non-phenothiazine diazepamone molecule that produces tranquilization and, together with tiletamine HCL, adequate muscle relaxation.

VERSATILE

Dose-dependent duration and depth of dissociative anesthesia

SHORT DURATION PROCEDURES

Suitable for common procedures requiring anesthesia and analgesia

Important Safety Information: Zoletil™ for Injection (tiletamine and zolazepam for injection) should not be used : 1) in dogs and cats with severe cardiac or pulmonary dysfunction, or pancreatic disease; 2) at any stage of pregnancy or for Cesarean section; 3) in cats suffering from renal insufficiency; 4) with phenothiazine-derivative drugs as the combination produces respiratory and myocardial depression, hypotension, and hypothermia. Pulmonary edema has been reported in cats. Respiratory depression may occur following administration of high doses. Copious salivation that may occur during anesthesia can be controlled by concurrent administration of atropine sulfate. Reduce dosage in geriatric dogs and cats. Patients should be continuously monitored. For the full prescribing information, visit vet-us.virbac.com or call 1-800-338-3659.
